

Thought Leadership Club Workshop

Workshop: Friday 10 November 2017, 10:00 – 15:30

Venue: 38 Mappin St, Workroom 3, University of Sheffield, S1 3JD

TWENTY65 is addressing the grand challenge of providing sustainable water for all by working in partnership across the water sector to tailor water systems so that they deliver positive impact on health, the environment, the economy and society

To create a future that provides sustainable water for all, we need to understand how we want our water systems to perform and what socio-technical solutions are required to achieve this.

The workshop will review socio-technical innovations to determine their potential to meet the performance metrics for the water systems of the future, testing these alone and in combination against a future scenario to contribute to a roadmap of research to achieve sustainable water for all.

Join us to:

- Contribute your perspectives and opinions about the future of the water sector
- Be part of a collaborative team developing a roadmap to transform the UK water sector, or beyond, in the next 50 years
- Network with academics, supply chain companies, policy makers, water companies, and trade associations
- Identify further opportunities to get involved in the TWENTY65 research consortium and its activities

Registration

To book a place, please register at:
